

I strongly SUPPORT the proposed RM-10352 request that the FCC codify the separation of wide-band and narrow-band modes on the 160M band as the FCC has seen fit to do on all of the other HF bands. This will bring the FCC rules into agreement with the existing ARRL band plan and will greatly assist in the enforcement of the needed separation of modes and will greatly enhance operation on this narrow band. In recent years, operation on the 160M band has seen explosive growth, and it is appropriate to regulate this band the same way that the other HF bands are regulated.
